Table of Contents

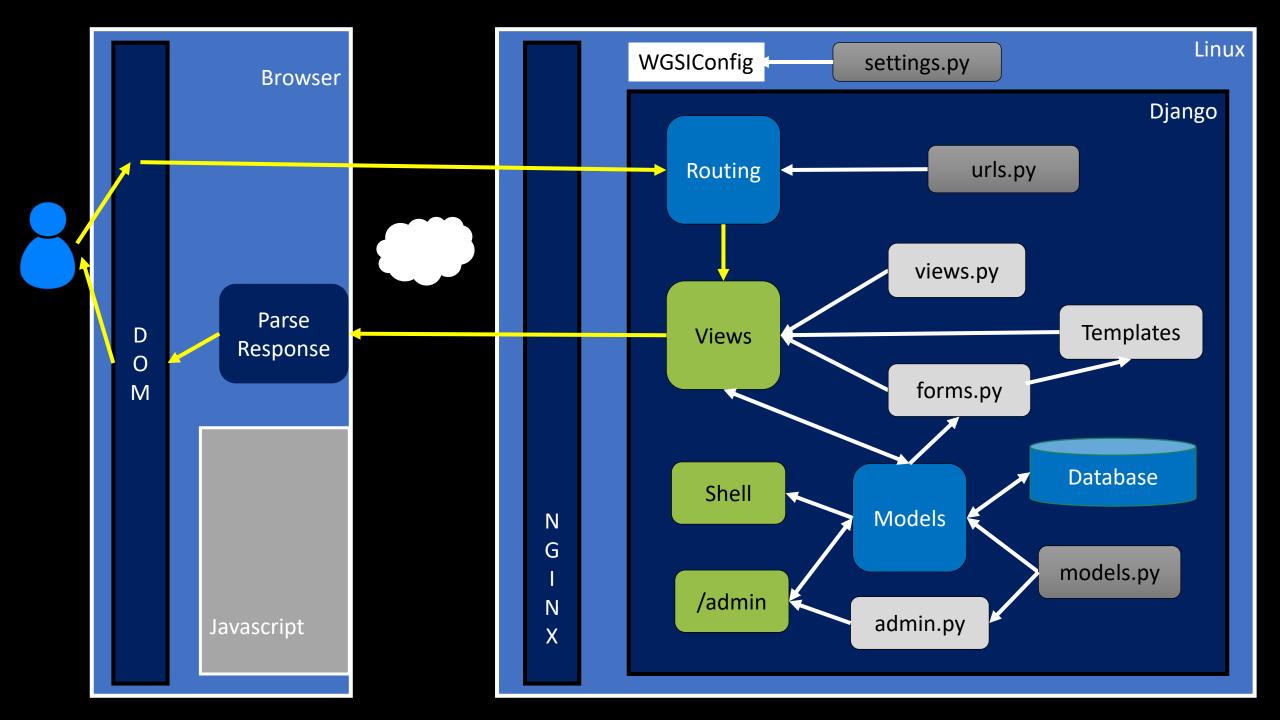

This slide deck consists of slides used in 5 lecture videos in Week 4. Below is a list of shortcut hyperlinks for you to jump into specific sections.

- (page 2) Week 4: One-to-Many Models Overview
- (page 10) Week 4: Removing Replication in One-to-Many Models
- (page 18) Week 4: Storing Primary and Foreign Keys in a Database
- (page 24) Week 4: Representing One-To-Many MOdels in Django
- (page 32) Week 4: Using the Django Shell to Explore ONe-to-Many Models

Charles Severance www.dj4e.com

Data Modelling One to Many

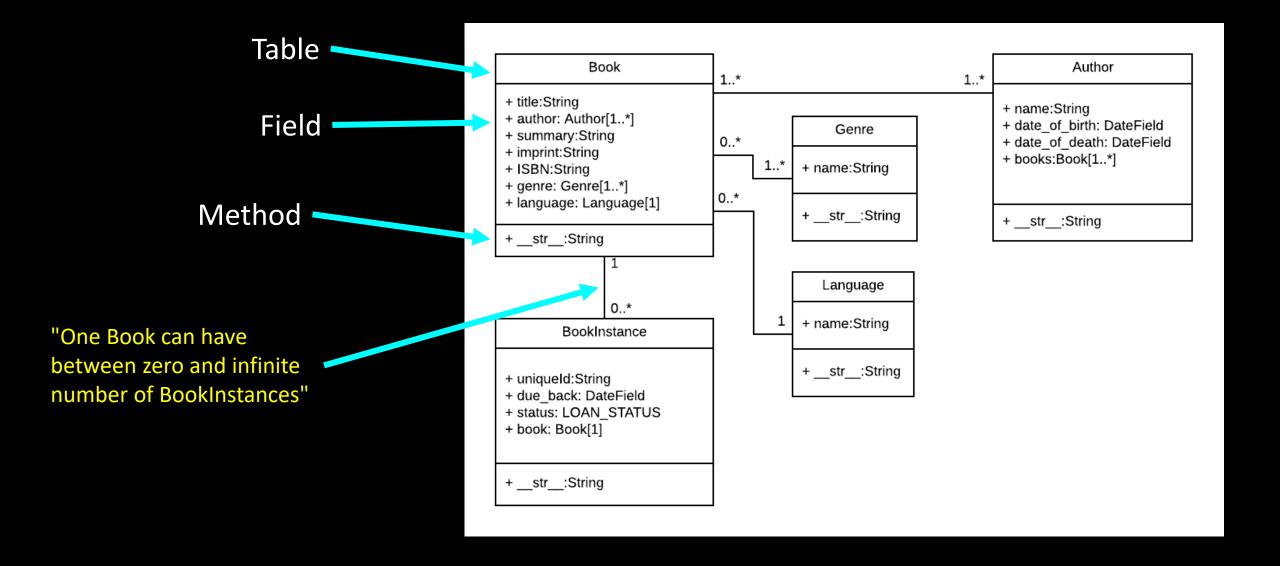

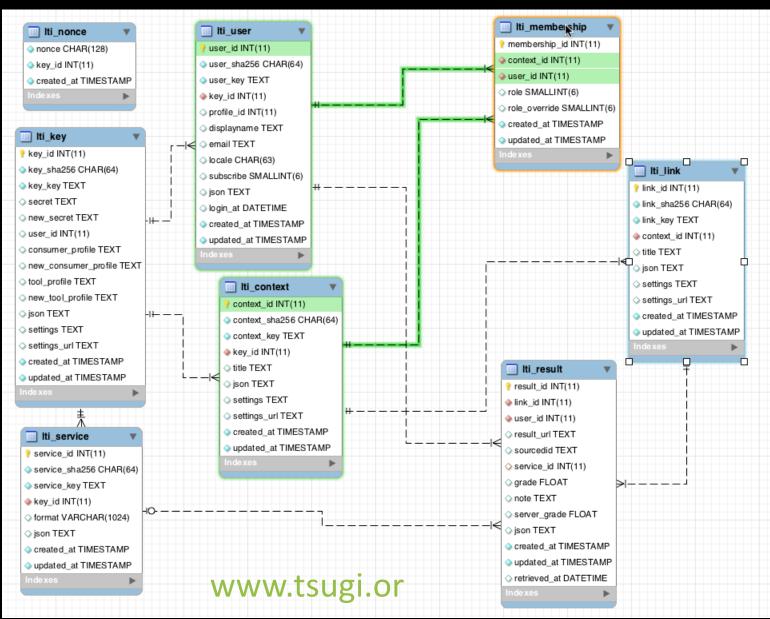

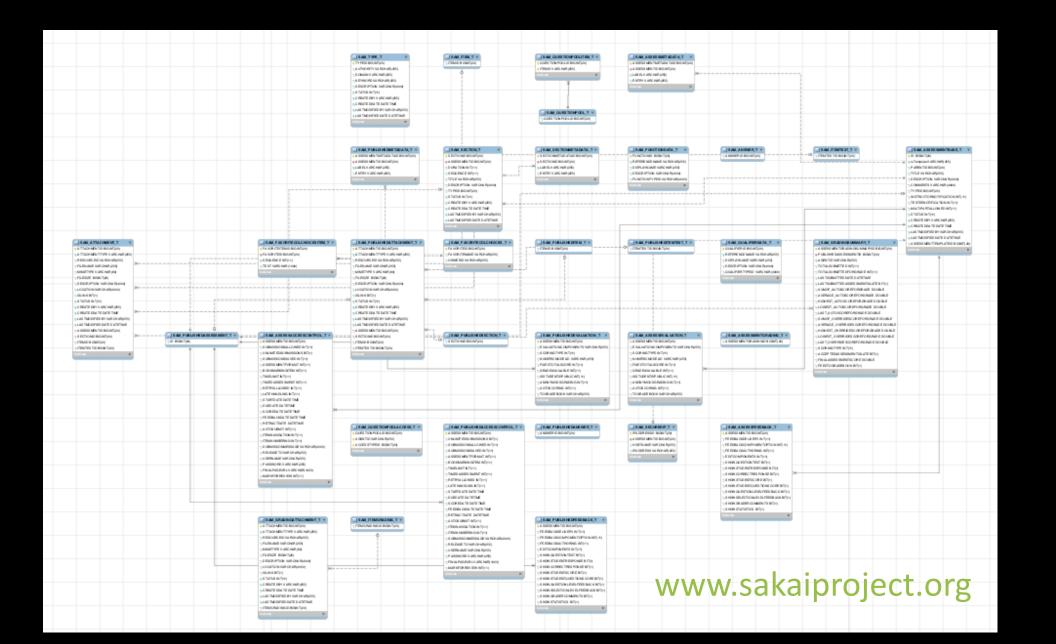

Model Design

Model Design

- Model design is an art form of its own with particular skills and experience
- Our goal is to avoid the really bad mistakes and design clean and easily understood models
- Model design starts with a sample data set and draws a picture

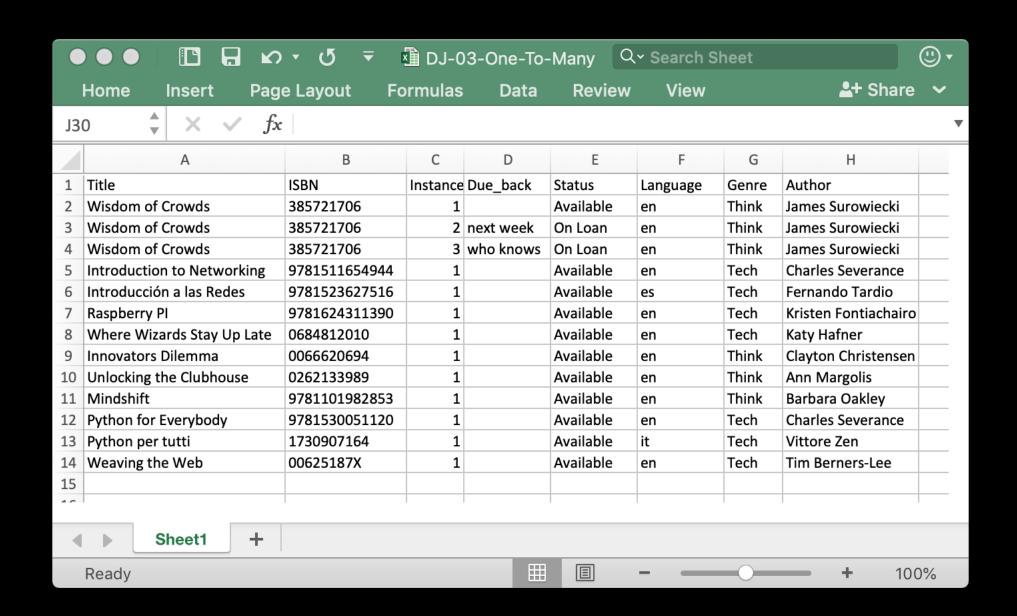

Database Normalization (3NF)

- There is *tons* of database theory / math we simplify this to a few rules...
- Do not replicate data reference data point at data
- Add a special "unique key" column to each table which we will make references to. By convention, many programmers and frameworks call this column "id"
- Use integers for to make links between tables integers are fast and small

Designing a Data Model

Key Terminology

- We add an *automatically incrementing* column to every row which we call the "Primary Key" for that row. We often name the column "id" to indicate that it is the "identifier" for that row.
- When we add a column to a table that "points to" a row in another table we call it a "Foreign Key" and often include the name of the destination table in the column name like "lang id"

Representing Links (Relationships) in Django

Lets get our ORM on...

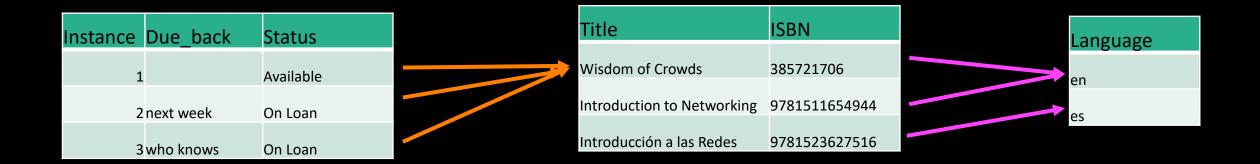

Model Field Types

- AutoField
- BigAutoField
- BigIntegerField
- BinaryField
- BooleanField
- CharField
- DateField
- DateTimeField
- DecimalField
- DurationField

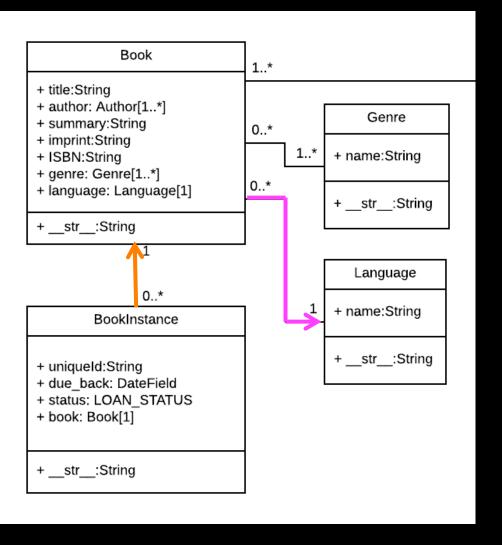

- EmailField
- FileField
- FilePathField
- FloatField
- ImageField
- IntegerField
- GenericIPAddressField
- NullBooleanField
- PositiveIntegerField

- PositiveSmallIntegerField
- SlugField
- SmallIntegerField
- TextFleld
- TimeField
- URLField
- ForeignKey
- ManyToManyField
- OneToOneField

https://docs.djangoproject.com/en/3.0/ref/models/fields/#field-types

```
from django.db import models
class Lang(models.Model):
   name = models.CharField(max length=200)
class Book (models.Model):
    title = models.CharField(max length=200)
    isbn = models.CharField(max length=13)
    lang = models.ForeignKey('Lang',
        on delete=models.SET NULL, null=True)
class Instance(models.Model):
    due back = models.DateField(null=True, blank=True)
   book = models.ForeignKey('Book',
        on delete=models.CASCADE)
```

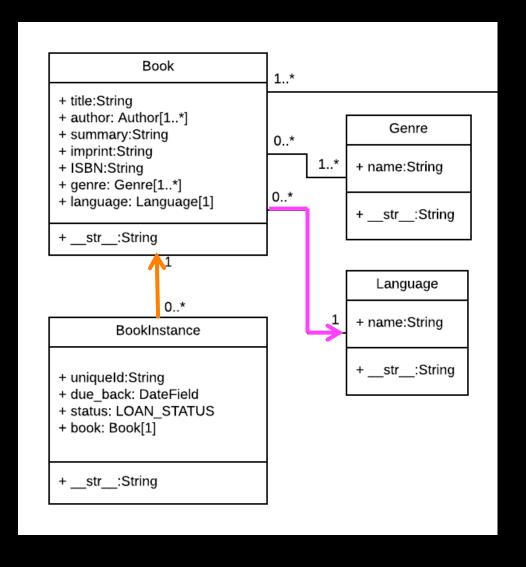

\$ python3 manage.py makemigrations Migrations for 'bookone': bookone/migrations/0001 initial.py - Create model Book - Create model Instance - Create model Lang - Add field lang to book \$ python3 manage.py migrate Operations to perform: Apply all migrations: admin,... Running migrations: Applying bookone.0001 initial... OK

From Model to Database

Note that makemigrations only "does something" when you create or alter a models.py file. The migrate only "does something" when there are migrations that are not yet applied to the database. Also an application must be added to settings.py before these commands see the models.py file for an application.

```
dj4e-samples$ sqlite3 db.sqlite3
SQLite version 3.24.0 2018-06-04 14:10:15
Enter ".help" for usage hints.
sqlite> .tables 'bookone%'
bookone book bookone instance bookone lang
sqlite> .schema bookone book
CREATE TABLE IF NOT EXISTS "bookone book" (
  "id" integer NOT NULL PRIMARY KEY AUTOINCREMENT,
  "title" varchar(200) NOT NULL,
  "isbn" varchar(13) NOT NULL,
  "lang id" integer NULL REFERENCES "bookone lang" ("id")
   DEFERRABLE INITIALLY DEFERRED
CREATE INDEX "bookone book lang id 24ba3759"
  ON "bookone book" ("lang id");
sqlite> .schema bookone lang
CREATE TABLE IF NOT EXISTS "bookone lang" (
  "id" integer NOT NULL PRIMARY KEY AUTOINCREMENT,
  "name" varchar(200) NOT NULL
sqlite> .schema bookone instance
CREATE TABLE IF NOT EXISTS "bookone instance" (
  "id" integer NOT NULL PRIMARY KEY AUTOINCREMENT,
  "due back" date NULL,
  "book id" integer NOT NULL REFERENCES "bookone book" ("id")
  DEFERRABLE INITIALLY DEFERRED
CREATE INDEX "bookone instance book id 1fa5e2e7"
  ON "bookone instance" ("book id");
sqlite> .quit
di4e-samples$
```

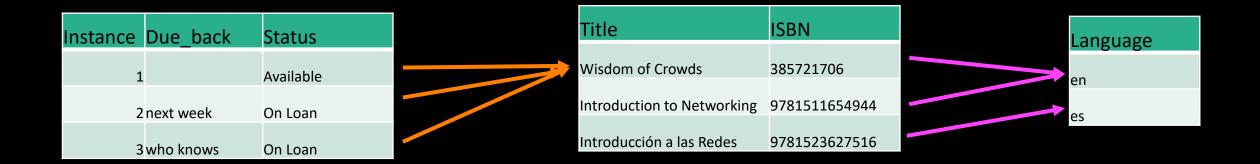

About on_delete

- What do we do when a row in one table points to a row in a "foreign" table via a foreign key and the "destination row" is deleted
 - on_delete = set_null Keep the row but set foreign key to null
 - on_delete = cascade Delete the row

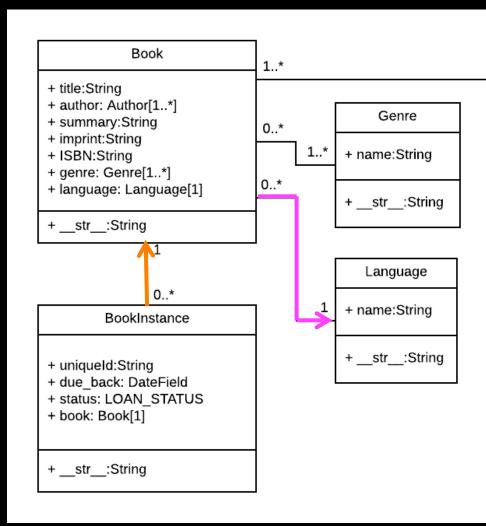

id	Title	ISBN	lang_id		id	Lang
1	Wisdom of Crowds	385721706	1	\rightarrow	1	on
2	Introduction to Networking	9781511654944	1		+	en
3	Introducción a las Redes	9781523627516	2		2	es

https://docs.djangoproject.com/en/3.0/ref/models/fields/#django.db.models.ForeignKey.on_delete

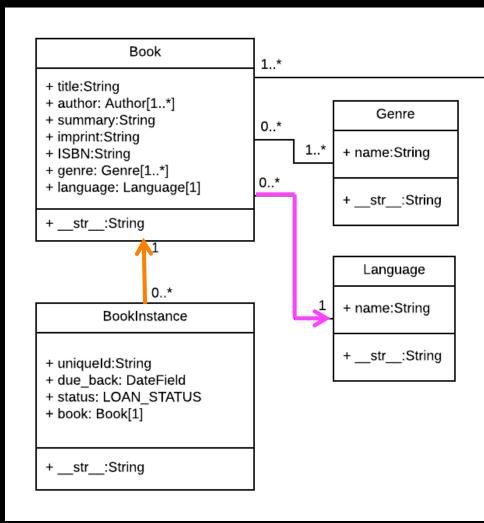

Using Models in the Django Shell

```
$ cd ~/dj4e-samples
$ python3 manage.py shell
>>> from bookone.models import Book, Lang, Instance
>>> z = Lang(name='en')
>>> z.save()
>>> z.id
>>> x = Book(title='PY4E', isbn='42', lang=z)
>>> x.save()
>>> x.id
>>> a = Instance(due back="2020-07-06", book=x)
>>> a.save()
>>> a.id
>>> quit()
```

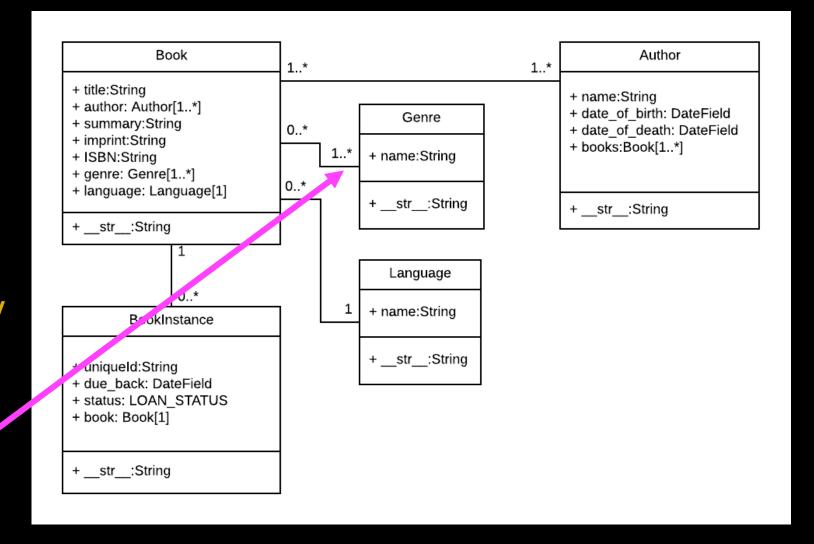

```
$ cd ~/dj4e-samples
$ python3 manage.py shell
>>> from bookone.models import Book, Lang, Instance
>>> x = Book.objects.get(pk=1)
>>> x
<Book: Book object (1)>
>>> x.title
'PY4E'
>>> x.lang.name
'en'
>>> y = Instance.objects.get(pk=1)
>>> y.due back
datetime.date(2020, 7, 6)
>>> y.book.title
'PY4E'
>>> y.book.lang.name
'en'
>>> quit()
```

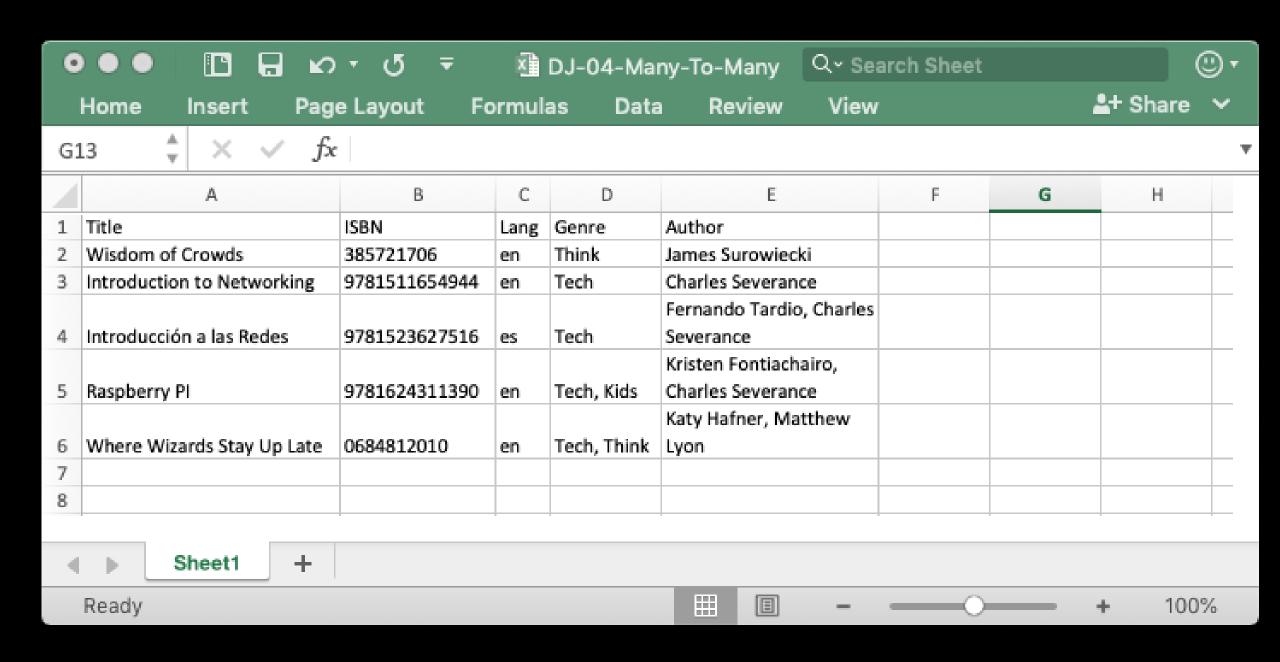

Coming Up Many-to-Many
